## Overview

List display (LD) for booking files or PNRs is available in Galileo when searching based on Air Segments, Hotel Segments or Car Segments.

This enhancement refers to the expansion of the search capabilities to include searching for PNRs with a specific segment status code and ticketing date, regardless of itinerary type.

## Customer Benefit

- Expand the list display function in Galileo to include a search parameter based on status code and ticketing date.

## Detail and Customer Examples

The “status code” (SC) and “ticketing time limit” (TL) modifiers can be used with the list display (LD) format to display a list of booking files or PNRs with status code, ticketing time limit and specific date.

There are four new error responses when the list display (LD) and status code modifier are used if an invalid status code is entered or if more than five status codes are entered.

### Modifiers

Two new modifiers that can be used with the List display (LD) format:

1. Status Code (SC)
2. Ticketing time limit (TL)

LD/SC does not work with ALL/ , TKT/ and UTK modifiers.

LD/SC works by specifying pseudo city codes and ABS (all branch).

A maximum of five status codes can be used with the list display (LD) modifier.

LD/TL works with booking files that have a date in the TAU and TAW fields of the booking file or PNR.
